Company IT security policy

Synthetic policy for the Document Intelligence project. Not a real company policy.

Password requirements

Account passwords must contain at least 14 characters. Use a unique passphrase for every work account. Do not reuse personal passwords. Multi-factor authentication is mandatory for email, remote access and the HR portal.

Access approval

The employee's line manager approves requests for business-system access. The IT Service Desk provisions approved access using the least-privilege principle. Shared accounts are prohibited.

Company IT security policy

Synthetic policy for the Document Intelligence project. Not a real company policy.

Security incidents

The Security Operations team is responsible for triaging security incidents. Employees must report suspected incidents to the IT Service Desk within 30 minutes of discovery. Preserve suspicious messages and do not forward them to colleagues.

Document handling

Store internal documents only in approved company storage. Do not send restricted documents to public AI services without explicit organizational authorization. Remove access promptly when an employee leaves the company.
